

# Interview: PRODIGY Is Classic Science Fiction Storytelling

[images: Prodigy Film LLC]

There is a very dangerous young girl inside a secret government facility, intelligent in a way that is both exhilarating and terrifying, and unless one man can find a way to reach her...

*Prodigy* is an independent feature film about what makes us human, and recalls - intentionally - the classic style of *The Twilight Zone* and *The Outer Limits*. Just as those TV shows often told stories that were actually more about the characters than the science fiction frames they lived in, *PRODIGY* takes the viewer into a character study of two smart, damaged people whose conversations may be the death of both of them.

Alex Haughey - one of the two writer/directors of the film, alongside Brian Vidal - stopped by The Bunker before the Kansas City Filmfest last week, where he talked about the inspirations and processes behind making *Prodigy*. Covering everything from the crucial - and somewhat unexpected - casting of star Savannah Liles as the titular character, to where the film and its creators go next, after all the great festival response.

Check out the trailer here:

*Prodigy* screens next on Monday, April 24th, at 8:15 PM at the RIVERSIDE INTERNATIONAL FILM FESTIVAL in Riverside, CA.
